Mike Polsgrove : DCC Projects Applications before purchasing it in order to gage whether or not it would be worth my time, and all praised DCC Projects Applications:

4 of 4 people found the following review helpful. A world of DCC possibilitiesBy Leonard J. LoomisSee my review of Polsgrove's Basic DCC Wiring For Your Model Railroad. This book is a worthy companion to that book. This book is also beautifully illustrated so the modeler has a good idea about what is under the covers of locos, command stations, boosters, decoders and the like. If a modeler does anything at all with a new DCC layout this book will be an invaluable guide. Buying a loco without lights and sound will inevitably lead to a decision to add them if it is possible. This book will show how. At this point, I must warn that not every book will contain everything a modeler needs. Success will depend on common sense, inventiveness, using the resources of a local train club, a couple of good sites on the internet, a local dealer, patience and care. But, the results are utterly worth it. Aside from these two books if you are going to use any Loconet cabling at all, do it right, spend the bucks and get a good crimper. Home depot sells

Klein Tools Ratcheting Modular Crimper/Stripper at about \$30. The instructions are dense -- it took me ten practice tries and about 10" of 1" cable strips but the cable (and I'm sure successive ones) will work the first time and it shouldn't take longer than a minute or two to make. 0 of 0 people found the following review helpful. DCC Projects Applications Vol. 2 answers questions about starting with or upgrading Digital Command Control equipment, selecting state-of-the-art gear, and installing and operating these new electronics. Based on the popular Model Railroader magazine column, DCC Corner, this volume focuses on actual readers problems and gives real-world solutions that apply to commonly available contemporary equipment.

About the AuthorMike is the Model Railroader columnist upon which all the content is based, although he did not necessarily write all the columns. David is the editor who selected the which columns from past issues of Model Railroader for inclusion in the book.
